

$$\frac{qe^2}{16} - \frac{2}{3} x_1 + \frac{x_1}{24} - \frac{qe^2}{48} = 0$$

$$\frac{4}{48} \cdot \frac{1}{24} qe^2 + \frac{15}{24} x_1 = 0 \Rightarrow \boxed{x_1 = \frac{qe^2}{15}}$$

$$x_2 = -\frac{4}{60} qe^2 + \frac{qe^2}{8} = \boxed{\frac{13}{120} qe^2}$$
