

EQUILIBRIO AL NODO D

La risultante del momento deve essere uguale a 0

$$4EI\varphi/L + 4EI\varphi/L + G \times It \times \varphi / I - qL^2/2 = 0$$

$$\varphi (4EI/L + 4EI/L + G \times It / L) = qL^2/2$$

$$\underbrace{\varphi (4EI/L + 4EI/L + G \times It / L)}_{Kt} = qL^2/2$$

$$\varphi = qL^2/2 Kt$$

MOMENTO TORCENTE : $M_t = G \times It \times \varphi / I = G It ql / 2 Kt$

MOMENTO FLETTENTE : $M_f = 4 EI \times \varphi / I = 2 EI ql / Kt$
