

TRAVE IPERSTATICA 2D

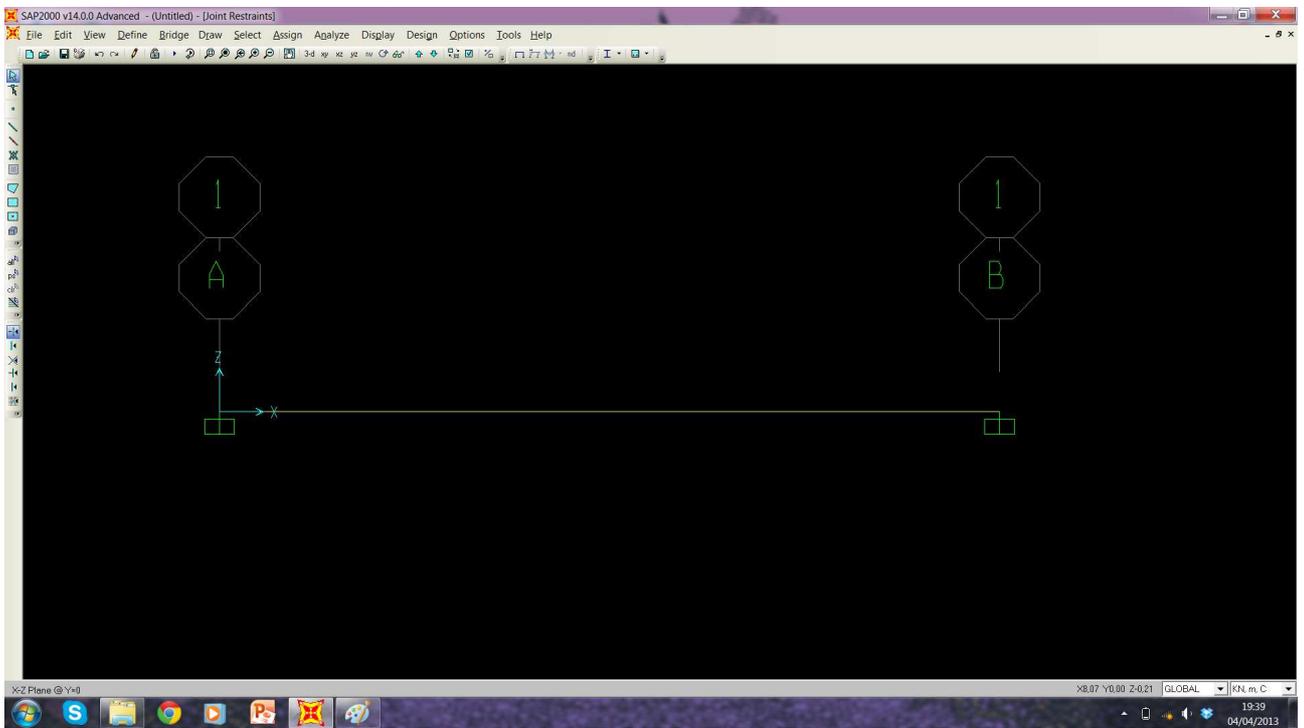

- Aprire sap 2000 - unità di misura KN/m/C – new model e selezionale la griglia e mettiamo la combinazione $X=2$ $Y=1$ $Z=1$ e $X=6$ $Y=1$ $Z=1$

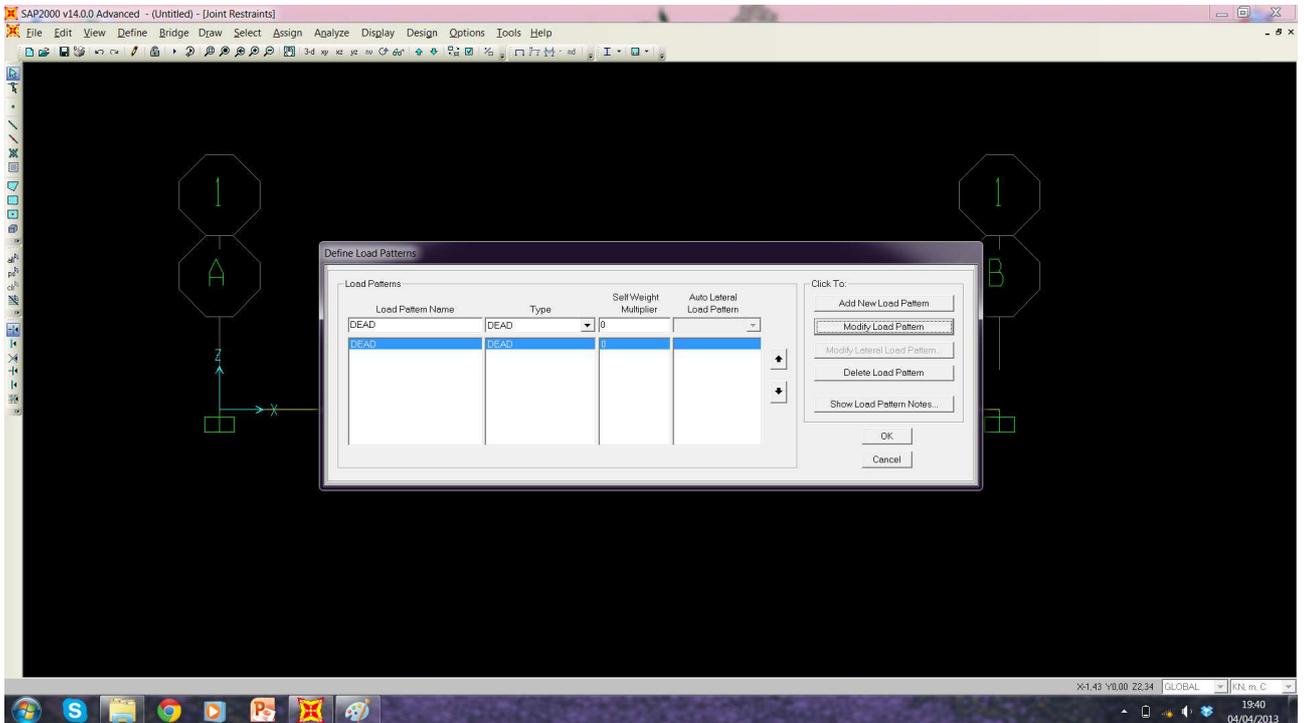

- Impostiamo il piano di lavoro su XZ - Disegnare la trave con il comando Draw Frame seguendo la griglia impostata

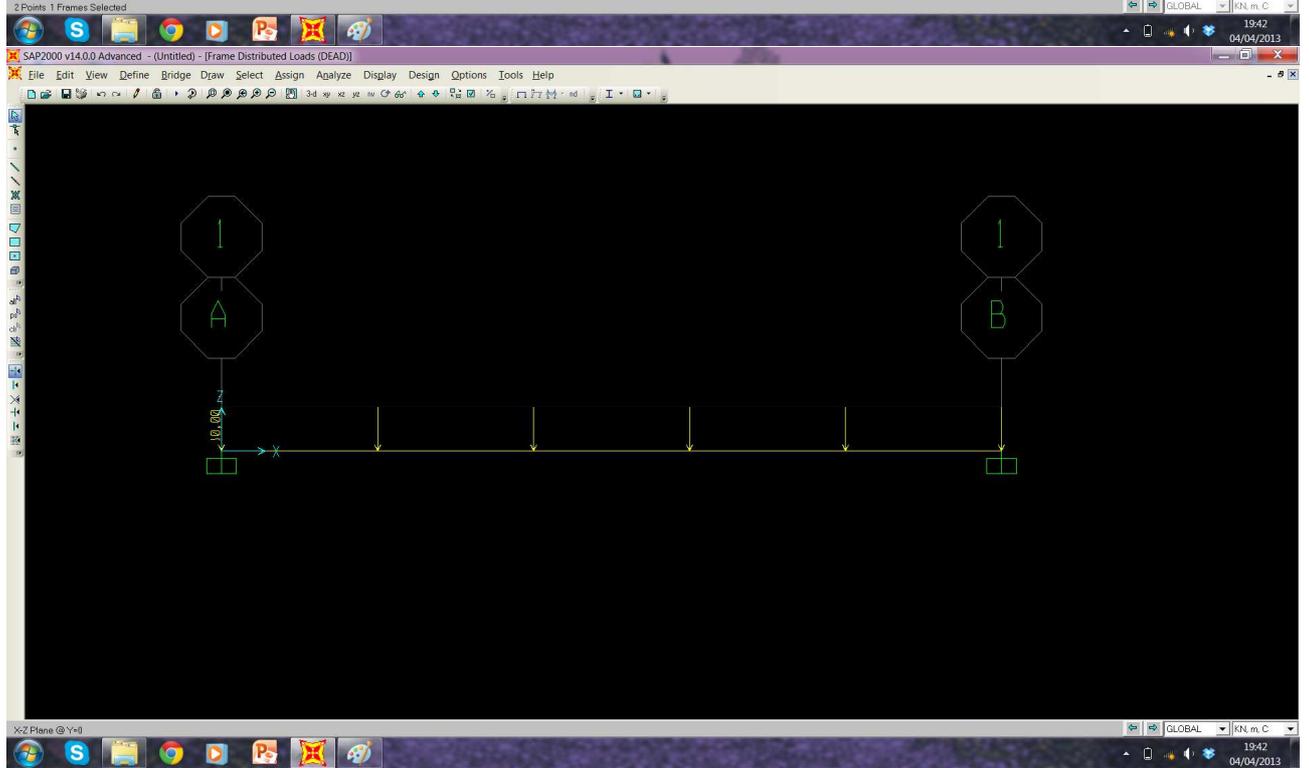

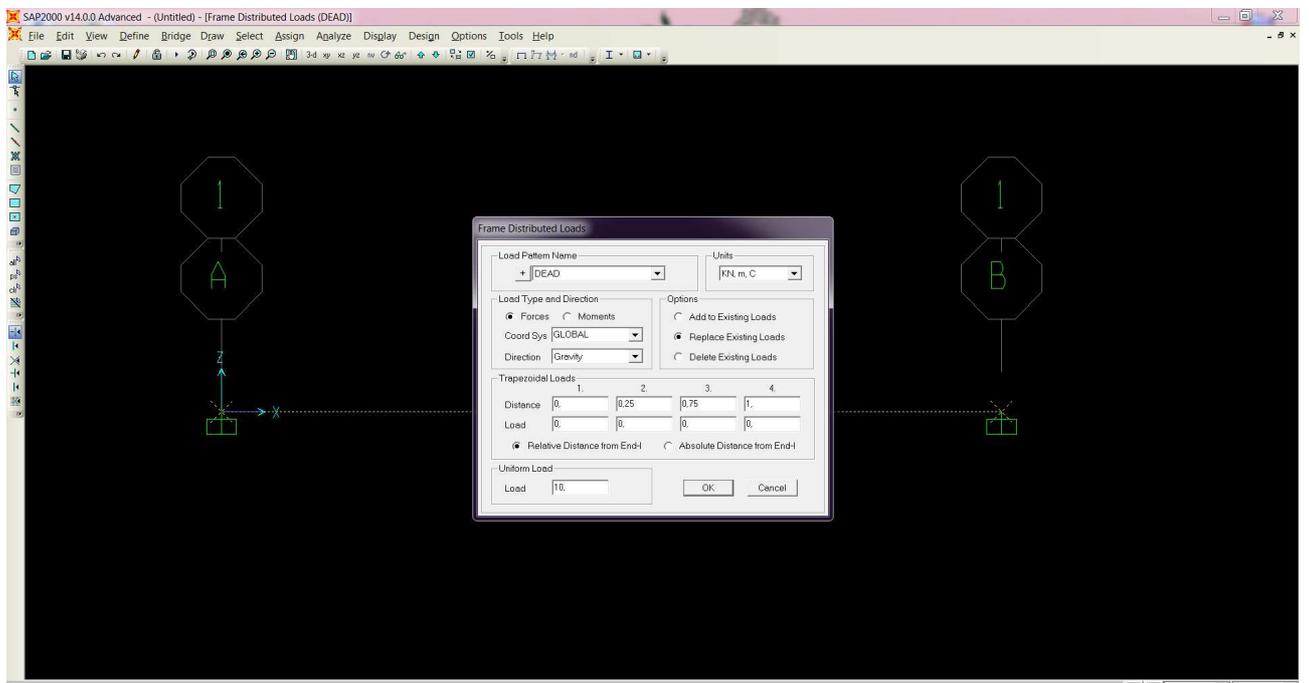

- Assign – vincoli con i due incastrati agli estremi

- Definisco come peso proprio un valore nullo con Define – load patterns – carico zero (self weight multiplier) – modify load pattern

- Selezionare la trave e assegnare un carico distribuito – assign – frame loads – distributed –assegnare valore 10 KN

- Run – modal do not run – salvare
